FOR PARTS & SERVICE CALL

MULTI-SPRAYER.COM

Thank you for purchasing the world's greatest sprayer. The Multi-Sprayer M Series unit will replace your pump-up sprayers.

The M Multi-Sprayer is a tough, compact and versatile electric sprayer, equipped with a SOLVENT COMPATIBLE VITON PUMP. It was designed to be easily transported to the job taking up limited space. On the job, its 20 foot electric cord and 10 foot coiled spray hose allow you to cover a large area from each electric receptacle..

COMMON FEATURES:M1 AND M2 MODELS

- Tough polyethylene case
- 2 Gallon quick change container capability
- 115 Volt, 70 psi pump (230 volt available)
- 20 Foot electric cord & 10 foot no wind up, coil spray hose
- Pump solvent with compatible, viton seals
- Spray trigger with viton seal; also QC
- One year warranty parts and labor

M1 FEATURES

- 2 foot wand with stainless steel 8004 V-jet nozzle
- Weight 11 pounds empty

M2 FEATURES

- Quick connect 2 foot wand with 8004T-jet and a check valve/strainer to stop drips.
- Quick connect 3" upholstery tool with brass 50015T-jet and strainer/ check valve to stop drips
- Weight: 12 pounds empty

GETTING STARTED

Slant your 2 gallon container of solution into the multi-sprayer cap to the right. Connect the male/female cap quick connect system, and then push the container into the multi-sprayer. To remove container, push the silver tab on the female quick connect tip out of container and remove.

Plug in, turn on switch and squeeze trigger to spray.

IF YOU HAVE MODEL M2

PRIMING

1. Remove the 2 foot carpet wand or the upholstery tip, at the quick connect.
2. Squeeze the trigger, allowing the liquid to advance to near the trigger.
3. Re-connect the 2 foot carpet wand or upholstery tip and begin spraying. The check valve/strainers inhibit flow when starting but stop drips after spraying.

MAINTENANCE

At the end of the work period, a mild detergent solution followed by fresh water should be sprayed to clean the pump and hose. When switching between water based and solvent solutions, a warm water flush after water base and a cold water flush after solvents is best for flushing the system. The case cleans easily with a mild detergent and retains its luster with application of a plastic/vinyl product.

SAFETY PROCEDURES

RISK OF EXPLOSION — DO NOT SPRAY COMBUSTIBLE FLUIDS

PLUG INTO 115-120 VOLT 50/60 CYCLE GROUNDED

3-PRONG RECEPTACLE

MULTI-SPRAYER PARTS

KEY	PART#	DESCRIPTION
5*	BST-1YSS	SS Female Coupler, 1/8"
6	TR2022	Brass/Viton Trigger
7	H14-2MUSBR	Compression and Strain Relief
8	FW-10	Urethane Coiled Spray Hose 10" 1/4 ID

M2 WACS WAND

KEY	PART#	DESCRIPTION
2	CP1325	Brass Nozzle Cap
1B	TPU50015	Brass T-Jet Nozzle
26	4193-A-20-50SS	Strainer W/Check Valve
2B	CP1336	Brass Male Bod
27	BST-N1	Brass Male Coupler

WACS (Exploded) – Complete M2 Upholstery Wand

TO REMOVE PUMP

1. Remove nylon tabs by tapping out from inside of solution container compartment.
2. Remove bottom plate to access pump.

WARRANTY

Your multi-sprayer M units carry a one year parts and labor warranty. The date of manufacture is stamped on the serial plate. Keep your receipt for exact date of ownership for warranty purposes.

FREEZING CAN DAMAGE THE MULTI-SPRAYER AND IS NOT COVERED BY THE WARRANTY.

Consult the chemical guide available from your distributor or manufacturer for chemical compatibility. Chemical damage to the pump is not covered by the warranty.

APPROXIMATE RATE OF SPRAY

FROM T-JETS & V-JETS USING 50 PSI PUMP:

TIP SIZE	GAL per MIN	TIP SIZE	GAL per MIN
XX050	.055	XX04	.44
XX01	.11	XX05	.55
XX015	.16	XX06	.66
XX02	.22	XX08	.88
XX03	.33	XX10	1.10

XX — Degree of arc of spray. Available from 0 to 110 degrees.

TROUBLE SHOOTING

MOTOR OPERATES, BUT NO SPRAY:

- Male and/or female QC on jug failure
- If you have M2 model, see “Getting Started” instructions on page 3 and on back of sprayer
- Restricted intake or discharge line. Clogged suction strainer, kinked suction or spray hose, clogged spray tip, broken or clogged trigger
- Air leak in suction hose
- Broken or worn pump parts; valve chamber, or diaphragm

MOTOR FAILS TO RUN:

- Switch defective or loose wiring connection
- Defective motor
- Frozen cam bearing

LOW PRESSURE AND PRESSURE:

- Partially clogged lines, strainers, tip or trigger
- Worn pump cam bearing (also excessive noise)
- Broken or worn pump parts; valve chamber or diaphragm

LEAKING:

- Hole in hose, cracked pump housing
- Loose or broken hose barb at pump inlet or outlet
- Loose or broken hose clamp at pump inlet or outlet
